Git

Project : Todo List

Name: Todo List

Description: This project explores 3 todo list implementations with identical CRUD functionality. Each uses different tools: some leverage React hooks (useState, useEffect), useContext, and useReducer, while another employs Redux. Notifications vary: some are basic, while others utilize Notistack or React Hot Toast libraries. All data is stored in local storage.

Tools:
Front-end: React, Redux, Tailwindcss, ReactIcons.
Back-end: localStorage

Demo Link:
https://panduan-reactjs.vercel.app/mini-projects/react-crud

Project : Kamus Mini

Name: Kamus Mini

Description: This project provides a simple live search with limited results. The data is an array of objects containing a list of terms and their meanings, stored manually in a javascript file.

Tools:
Front-end: React, Redux, Tailwindcss, ReactIcons

Demo Link:
https://mkhotami-ringkasan.vercel.app/

Project : Sistem Toko

Name: Sistem Toko

Description: Developed a project that retrieves and displays product data from a public API, *SistemToko*, utilizing grid system cards for efficient presentation. Implemented a responsive design approach, ensuring seamless viewport adaptation across various devices. Incorporated advanced features such as dark mode, breadcrumb navigation, data filtering, and search functionality to enhance user experience and accessibility.

Tools:

Front-end: React, Redux, Axios, Reacticons, Tailwindcss.

Back-end: public api sistem toko

Demo Link:

https://panduan-public-apis.vercel.app/sisko/product

Project : Omdbapi

Name: Omdbapi

Description: This project showcases movie data retrieved from the public API, Omdbapi. The data is presented in a grid system card format, ensuring compatibility across various viewport sizes. It includes dark mode, breadcrumbs, data filtering, and search functionality.

Tools:
Front-end: React, Redux, Axios, Reacticons, Tailwindcss.
Back-end: public api *Omdbapi*

Github Link:
